address in the track, the control means comprising addressing means (31) for translating the physical addresses into the logical addresses and vice versa in dependence on defect management information, the defect management information at least including remapping information indicative for translating a logical address initially mapped to a physical address exhibiting a defect to an alternate physical address in a defect management area, and defect management reorganizing means (34) for determining, via the defect management information, the physical addresses of remapped logical addresses in a logically continuous address range, and reorganizing the defect management information by retrieving, from a single defect management area, a number of blocks from physical addresses corresponding to a number of remapped logical addresses in an address range in the logically continuous address range, buffering the number of retrieved blocks, and providing at least one of the retrieved blocks when a remapped logical address is to be read, as recited in claim 8, or a method of defect management for use in recording information in blocks having logical addresses, comprising a combination of steps: locating each block at a physical address in a track on a record carrier, translating the logical addresses into the physical addresses and vice versa in dependence on defect management information, and maintaining the defect management information in defect management areas, the defect management information including remapping information indicative for translating a logical address initially mapped to a physical address exhibiting a defect to an alternate physical address in a defect management area, the method comprising detecting a logically continuous range of blocks of information, in particular real-time data like digitally encoded video, detecting, via the defect management information, the physical addresses of remapped logical addresses in the logically continuous address range, and reorganizing the defect management

information by remapping at least one of the remapped logical addresses to a different physical address for facilitating read-out of the remapped logical addresses in the logically continuous address range from a single defect management area, as recited in claim 10. Claims 2-7 and 9 are allowable with their respective parent claim.
